

Ceiling Loops

Showing a layout for a wiring plan that includes Sconce Runs.
Lay the Ceiling Loop with a 1 1/2" flap over the Main Loop. Be sure you have copper-over-copper and blue-over-blue (if not, start the tapewire on the other side of the house)

Each Ceiling Loop is one piece, no splices.

If no sconce runs are intended, Ceiling Loops may be laid before the Dividers or through E-Slots at the tops of the Dividers.

Ceiling Flap
copper-over-copper
blue-over-blue

Wrong!
